PROFESSIONAL SUMMARY

Full-stack developer and Computer Science graduate with production experience shipping features on a live business platform (Next.js, ASP.NET Core, PostgreSQL) and hands-on research building Generative AI systems — Retrieval-Augmented Generation, LangChain, and applied machine learning. Comfortable owning a feature from database schema to UI, and from ML pipeline to deployed inference. Live portfolio and source code available above.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript, Java, C
- **Frontend:** React.js, Next.js, Angular, HTML5, CSS
- **Backend:** ASP.NET Core, FastAPI, REST API, Node.js
- **Databases:** PostgreSQL, MongoDB (Basic), SQL, NoSQL
- **AI / ML:** RAG, LLM Integration, Prompt Engineering, TensorFlow, NLP, Vector Databases (FAISS, Chroma)
- **Engineering Practice:** OOP, Data Structures & Algorithms, Unit & Integration Testing, Agile, Git/GitHub
- **Tools:** Git, GitHub, VS Code, Postman, Docker (Basic)

EXPERIENCE

Software Developer Intern — Full Stack | Saadhika Technologies LLP *Jun 2025 – Present*

- Shipped production modules for Saadhika MarketPlace, a back-office admin platform (Next.js, TypeScript, ASP.NET Core, PostgreSQL) used to run live business operations for internal teams and vendors.
- Built a category management system (create, update, soft-delete) that eliminated ghost UI entries and improved data integrity across the admin dashboard — removing a recurring source of support tickets.
- Root-caused and fixed a critical REST API failure in the createOrUpdateOrganization endpoint (payload key-casing mismatch + invalid foreign key references), restoring full CRUD functionality and cutting related production downtime.
- Worked across the full stack in a live codebase — React/Next.js frontend, ASP.NET Core backend, PostgreSQL — coordinating directly with backend and QA engineers on shared features.

AI/ML Research Intern | PACE Lab *Dec 2024 – Jan 2025*

- Built an end-to-end ML pipeline in Python (Scikit-learn) — data preprocessing, feature engineering, training, and evaluation — to power a music recommendation system from Spotify playlist data.
- Designed and tuned Logistic Regression and Random Forest classifiers for healthcare outcome prediction, applying feature engineering and hyperparameter tuning to improve model performance.

PROJECTS

Fake News Detection System — RAG Pipeline

Python · LangChain · LLM · FastAPI · FAISS · Chroma · Semantic Search | github.com/Joseph-siby/Fake-news-detection-using-rag

- Built an end-to-end Retrieval-Augmented Generation system that classifies news articles by combining semantic retrieval with LLM-based reasoning, improving on a traditional keyword-based NLP baseline.
- Implemented document ingestion, chunking, vector embedding, and semantic search with FAISS, plus a prompt-engineered reasoning layer over the retrieved context.
- Architected the system to swap vector stores (FAISS ↔ Chroma) and LLM providers without touching the retrieval logic, keeping the backend extensible for future models.

AI-Powered Smart Glass for Speech-Impaired Users

Python · TensorFlow · CNN · OpenCV · MediaPipe · Computer Vision | github.com/Joseph-siby/ASL-translator---CNN-

- Built a real-time hand-gesture recognition system — a CNN trained on ASL gesture data — enabling non-verbal communication for speech-impaired users.
- Built a low-latency OpenCV + MediaPipe video pipeline achieving high-accuracy gesture classification from live webcam input in real time.
- Added a text-generation layer converting recognized gestures into readable output, delivering a working end-to-end assistive communication tool.

EDUCATION

B.Tech — Computer Science and Engineering

Nehru College of Engineering and Research Centre, Thrissur | Graduated May 2026
